 12 credits for theory=**12 hours**
 8 credits for practicals=**16 hours**
Total required hours per week=28 hours
Extra hours =6.5 hours (we can arrange tutorial class, remedial class, library class and other co-curricular activities during these hours).

PROGRAMME OUTCOMES (POs) FOR BACHELOR OF SCIENCE (B.Sc.)

Our program prepares graduates to achieve the following POs within three years of graduation.

POs	Integrated Justification
PO1: Discipline-Specific Knowledge	The program develops a strong foundation in scientific principles through interdisciplinary learning, enabling students to apply Natural Sciences and Mathematics to real-world problems. It builds core competencies that prepare graduates for higher education and professional careers.
PO2: Problem Analysis	Graduates develop critical thinking and analytical skills by integrating knowledge from Natural Sciences and Mathematics. They apply scientific methodologies and quantitative techniques to independently solve complex issues.
PO3: Experimental Skills	Students gain hands-on experience in designing, conducting, and analyzing experiments using modern scientific tools. This fosters accuracy, reproducibility, and practical application across various domains.
PO4: Environment and Sustainability	The curriculum promotes ecological awareness and sustainable practices. By linking Natural Sciences with global environmental issues, students develop a scientific approach to sustainability and social responsibility.
PO5: Ethics and Values	Graduates uphold Gandhian values, professional ethics, and integrity. The program fosters responsible application of scientific knowledge within ethical frameworks, encouraging social accountability.
PO6: Communication	Students acquire strong oral and written communication skills, enabling them to articulate scientific concepts, write technical reports, and engage in interdisciplinary dialogue effectively.
PO7: Modern Tool Usage	The program familiarizes students with advanced scientific instruments, IT tools, and analytical software. Graduates can ethically and effectively apply these tools across research and industry sectors.
PO8: Teamwork and Leadership	Graduates are prepared to contribute meaningfully to multidisciplinary teams, demonstrating leadership and collaboration in diverse scientific and professional environments.
PO9: Lifelong Learning	The program instills motivation for lifelong learning and adaptability. Students are equipped to independently explore and incorporate new knowledge and skills in a rapidly changing world.

PO10: Project Management	Graduates develop organizational and economic skills essential for managing scientific research projects and investigations. The curriculum emphasizes planning, execution, and evaluation of scientific work.
PO11: Innovation and Entrepreneurship	The program fosters creative thinking, problem-solving, and entrepreneurial mindset. Students are encouraged to develop innovative scientific solutions with societal impact.
PO12: Societal Contribution	Graduates understand the role of science in society and apply their knowledge for the public good. Emphasis is placed on rural development, informed public discourse, and Gandhian ideals of service and self-reliance.

PROGRAMME SPECIFIC OUTCOMES (PSOs) FOR BACHELOR OF SCIENCE (B.Sc.-Chemistry)

After successful completion of “Three Year Degree Program” in Chemistry, a student will be able to:

PSO Number	Programme Specific Outcomes (PSOs)	Justification
PSO1	Acquire foundational knowledge in key branches of chemistry—such as inorganic, organic, physical, analytical, and industrial—to solve problems, interpret chemical data, assess processes, and develop innovative, interdisciplinary solutions.	This PSO supports the development of discipline-specific knowledge (PO1) and problem analysis (PO2) while fostering an understanding of microbial roles in environmental sustainability (PO4).
PSO2	Develop and apply practical lab skills in techniques like titration, chromatography, spectroscopy, synthesis, and analysis; interpret results, assess method reliability, and refine protocols for improved outcomes.	This PSO is grounded in experimental skills (PO3), enhances familiarity with modern tools (PO7), and prepares students for basic project management (PO10) in scientific settings.
PSO3	Integrate core chemistry concepts with microbiology, physics, math, and environmental science to interpret phenomena, analyze complex problems, and develop innovative, real-world solutions through a multidisciplinary approach.	This outcome aligns with ethics and values (PO5), communication (PO6), teamwork (PO8), lifelong learning (PO9), and societal contribution (PO12) by fostering responsible citizenship and public health awareness.

CO Attainment Matrix

Benchmark (Target attainment) is 60% for all Cos for all courses of B.Sc. Program

Attainment Criteria	Level	Description
$\geq 60\%$ students scored \geq Benchmark	Level 3	High Attainment – Most students achieved the expected outcome.
50–59% students scored \geq Benchmark	Level 2	Moderate Attainment – Outcome partially achieved.
40–49% students scored \geq Benchmark	Level 1	Low Attainment – Minimal outcome achieved.
$< 40\%$ students scored \geq Benchmark	Level 0	Not Attained – Remedial action required

B.Sc. (Chemistry) Semester-1				BCHE-101: Physical Chemistry								MAJOR						
Credit - 3, Teaching Hours - 45																		
Course Outcomes (COs)																		
After studying this course, the student will be able to....																		
CO1: interpret ionic equilibrium in terms of acid-base reactions, pH scale, hydrolysis of salt, and buffer systems.																		
CO2: describe the relationship between physical properties and molecular structure																		
CO3: recognize the catalytic processes and adsorption phenomena																		
Mapping Matrix of POs, PSOs and COs

BCHE-301P: Organic Chemistry Practical

MAJOR

Credit -3, Teaching Hours - 90

Course Outcomes (COs)

After studying this course, the student will be able to....

CO1: demonstrate proficiency in performing qualitative analysis of organic compounds using standard laboratory techniques.

CO2: apply appropriate methods and safety protocols to synthesize organic compounds effectively in a laboratory setting.

Mapping Matrix of POs, PSOs and COs

Teaching Methods and Tools

➤ Experimentation

➤ Hands on Training

Experiments

(A) Preparation of organic compounds and its confirmation by function group test and M.P (with mole ratio calculation)	30 Hrs
<div><div>(1) Oxidation: Benzoic acid from benzaldehyde by KMnO₄</div><div>(2) Nitration: p-nitroacetanilide from acetanilide</div><div>(3) Nitration: 1,3-dinitrobenzene from nitrobenzene</div></div>	
(B)Qualitative analysis of organic compounds	60 Hrs

Candidates are expected to perform the following tests for the organic compounds

(1) Nature of compound: acidic, basic, phenolic, neutral based on solubility tests

(2) Presence of elements: Lassaigne’s test (C, H, N,S,X)

(3) Identification of functional groups:

-COOH

-OH (alcoholic)

-OH (phenolic)

-CHO

-CH

>C=O

-NH₂

-NO₂

-CONH₂

-X

(4) B.P. / M.P. (5)Identification of compound

List of organic compounds for qualitative analysis

Compounds	Acidic	Basic	Phenolic	Neutral
C, H, O elements	Tartaric acid		Phenol	Methanol

	Citric acid Phthalic acid Benzoic acid Oxalic acid Succinic acid	-	α -Naphthol β -Naphthol Resorcinol	Ethanol Benzaldehyde Acetone Acetophenone Benzene Toluene Naphthalene	
C, H, O, N elements	Anthranilic acid p-Nitrobenzoic acid	Aniline o-Nitroaniline m-Nitroaniline p-Nitroaniline α -Naphthylamine	o-Nitrophenol p-Nitrophenol	Acetamide Benzamide Nitrobenzene Urea	
C, H, O, N, S elements	-	-	-	Thiourea	
C, H, O, X elements	-	-	-	Chloroform Carbontetrachloride Chlorobenzene Bromobenzene

Internal/Online Assessment (40%)	Internal Practical Examination
External Assessment (60%)	Term End Practical examination

B.Sc. (Chemistry) Semester-4				BCHE-401: Organic Chemistry									MAJOR					
Credit - 3, Teaching Hours - 45																		
Course Outcomes (COs)																		
After studying this course, the student will be able to....																		
CO1: interpret ionic equilibrium in terms of acid-base reactions, pH scale, hydrolysis of salt, and buffer systems.																		
CO2: describe the relationship between physical properties and molecular structure																		
CO3: recognize the catalytic processes and adsorption phenomena																		
Mapping Matrix of POs, PSOs and COs

➤ Hands on Training																	
Experiments																	
(A) Qualitative analysis of inorganic mixture															80 Hrs		
Qualitative analysis of Inorganic mixture containing six radicals only. The following radicals are suggested:Na ⁺ , K ⁺ , NH ₄ ⁺ , Mg ²⁺ , Ba ²⁺ , Sr ²⁺ , Ca ²⁺ , Fe ²⁺ , Fe ³⁺ , Al ³⁺ , Cr ³⁺ , Zn ²⁺ , Mn ²⁺ , Co ²⁺ , Hg ²⁺ , Pb ²⁺ , Cu ²⁺ , Sn ²⁺ , Ag ⁺ and S ²⁻ , SO ₃ ²⁻ , SO ₄ ²⁻ , CO ₃ ²⁻ , Cl ⁻ , Br ⁻ , I ⁻ , NO ₃ ⁻ , NO ₂ ⁻																	
(B) Estimation															16 Hrs		
1. Estimation of glucose																	
2. Estimation of Oxalic acid by standardized NaOH																	
3. Estimation of vinegar by using standardized NaOH																	
4. Estimation of glycine by formal titration method (Soronsen’s Method)																	
(C)Preparation of coordination compounds:															54 Hrs		
1.Tris(thiourea)copper(I)sulphate,																	
2.Tetra ammine copper(II) sulphate,																	
3.Potash alum/ Chrome alum																	
4.Bis(dimethylglyoximinato)nickel(II),																	
5.Tris(acetylacetanoto)iron(III),																	
6.Potassium tri(oxalate)chromate(III)

UNIT 1 Introduction and history of polymeric materials 15 Hrs																																																																																																						
1.1 Different schemes of classification of polymers (1 hour) 1.2 Polymer nomenclature (1 hour) 1.3 Molecular forces and chemical bonding in polymers (2 hours) 1.4 Texture of Polymers (1 hour) 1.5 Criteria for synthetic polymer formation (2 hours) 1.6 Classification of polymerization processes (2 hours) 1.7 Relationships between functionality (2 hours) 1.8 Extent of reaction and degree of polymerization. (2 hours) 1.9 Bifunctional systems (1 hour) 1.10 Poly-functional systems (1 hour)																																																																																																						
References 1. Seymour, R.B. & Carraher, C.E. Polymer Chemistry: An Introduction, Marcel Dekker, Inc. New York, (1981). 2. Ghosh P., Polymer science & Technology, Tata-McGraw-Hill Education(1991).																																																																																																						
UNIT 2 Kinetics of Polymerization and molecular weight of polymers 15 Hrs																																																																																																						
2.1 Mechanism and kinetics of..... 2.1.1 Step growth (1 hour)																																																																																																						

	<p>2.1.2 Radical chain growth (1 hour) 2.1.3 Ionic chain (both cationic and anionic) (1 hour) 2.1.4 Coordination polymerizations (1 hour) 2.1.5 Copolymerization (1 hour) 2.2 Polymerization techniques. (2 hours) 2.3 Determination of molecular weight of polymers (Mn, Mw, etc) by 2.3.1 End group analysis (1 hour) 2.3.2 Viscometry (1 hour) 2.3.3 Light scattering and osmotic pressure methods (2 hours) 2.4 Molecular weight distribution and its significance (2 hours) 2.5 Polydispersity index. (2 hours)</p>

Assessment Method		
Internal/Online Assessment (40%)	<p>1. Written test (20 Marks) 2. Quiz / Group Discussion (10 Marks) 3. Assignments / Seminar (10 Marks)</p>	
External Assessment (60%)	<p>Term End Theory examination (Written test 60 Marks)</p>	

B.Sc. (Chemistry) Semester-5				DSE-503: Inorganic Materials of Industrial Importance				MAJOR (Optional)																																																																																										
Credit - 2, Teaching Hours - 30																																																																																																		
Course Outcomes (COs)																																																																																																		
After studying this course, the student will be able to....																																																																																																		
CO1: demonstrate understanding of raw materials, manufacturing processes, and uses of silicate-based industries.																																																																																																		
CO2: explain the types, components, and functioning of batteries and the role of fertilizers in agriculture.																																																																																																		
Mapping Matrix of POs, PSOs and COs

External Assessment (60%)	Term End Theory examination (Written test 60 Marks)	

B.Sc. (Chemistry) Semester-6	BCHE-603P: Nanotechnology and Greenchemistry Practical												MAJOR				
Credit - 2, Teaching Hours - 60																	
Course Outcomes (COs)																	
After studying this course, the student will be able to....																	
CO1: apply green chemistry principles to synthesize organic and coordination compounds using eco-friendly reagents and methods.																	
CO2: develop hands-on skills to synthesize and characterize nanomaterials using plant-based and sol-gel techniques.																	
Mapping Matrix of POs, PSOs and COs																	
CO \ PO	POs												CO Avg	PSOs			CO Avg

B.Sc. (Chemistry) Semester-6				BCHE-604: Analytical Methods in Chemistry						MAJOR								
Credit - 3, Teaching Hours - 45																		
Course Outcomes (COs)																		
After studying this course, the student will be able to....																		
CO1: apply principles of chromatography to separate and analyze chemical mixtures using techniques like TLC, paper, and column chromatography.																		
CO2: interpret pH metric, potentiometric, and conductometric titration data for determining equivalence points and pKa values.																		
CO3: demonstrate gravimetric procedures and perform quantitative calculations using classical precipitation methods.
